Professional Summary

Software and Cloud Engineer specialized in full-stack development and DevOps automation. Experienced in designing and deploying scalable cloud infrastructures using AWS, Kubernetes, Terraform, and Jenkins. Skilled in CI/CD pipelines, Infrastructure as Code, and container orchestration. Passionate about building reliable systems and optimizing deployment performance.

Professional Experience

Full Stack Engineer Intern

Jul 2025 – Aug 2025

High Commission for Planning (HCP), Oujda, Morocco

- Built a data visualization and management platform with two integrated web applications for regional statistics.
- Designed system architecture using UML and functional/non-functional requirement analysis.
- Developed a public portal for data exploration with optimized visual rendering and caching.
- Implemented an administrative dashboard with JWT authentication, role-based access, and REST APIs.
- Optimized database queries, client-side filtering, and performance for large-scale datasets.
- Documented API endpoints using OpenAPI/Swagger.

IT Systems and Infrastructure Intern

Jul 2024

Treasury of the Kingdom, Rabat, Morocco

- Contributed to enterprise system urbanization to improve interoperability and IT resource management.
- Deployed and configured GLPI (ITSM), Mercator (SIEM), and OpenProject (Agile management).
- Set up a virtualized infrastructure and optimized MySQL databases for scalability.
- Integrated LDAP and Active Directory authentication for centralized access control.
- Improved server performance through Apache2 configuration and PHP optimization.
- Authored detailed user documentation and conducted technical training sessions.

Technical Projects

End-to-End CI/CD Pipeline on AWS

Technologies: AWS, Jenkins, Kubernetes, Terraform, Docker

- Designed and deployed a fully automated CI/CD pipeline for cloud-native applications.
- Implemented Infrastructure as Code using Terraform for reproducible, secure deployments.
- Integrated Jenkins for continuous integration and Kubernetes for container orchestration.
- Configured Prometheus and Grafana for monitoring and observability.
- Automated testing and deployment to ensure quality and security compliance.

Regional Data Analytics Platform

Technologies: React, TypeScript, Django REST Framework, PostgreSQL

- Built a responsive full-stack web platform using React and Django REST API.
- Implemented JWT-based authentication and microservice-oriented architecture.
- Optimized backend for high-volume statistical data processing.
- Developed interactive dashboards and real-time analytics visualizations.

Education

State Engineer in Computer Science (Software and Digital Technologies) <i>École Mohammadia d'Ingénieurs (EMI), Rabat, Morocco</i>	2023 – 2026
Preparatory Classes – Mathematics and Physics (CPGE) <i>Morocco</i>	2021 – 2023
High School Diploma – Mathematical Sciences A (Honors) <i>Lycée Mohammed VI, Oujda, Morocco</i>	2020 – 2021

Technical Skills

Programming: Java, Python, SQL, JavaScript, TypeScript, Node.js, HTML, CSS
Frameworks: React, Django REST Framework, Spring Boot, Express.js, Hibernate
Databases: PostgreSQL, MySQL, MongoDB, SQL Server
Cloud & Infrastructure: AWS (EKS, EC2, S3, VPC, Lambda), Docker, Kubernetes, Terraform
DevOps Tools: Jenkins, Git, GitHub, Prometheus, Grafana, Linux, Apache2
Concepts: CI/CD, Infrastructure as Code, Cloud Security, System Design, Agile, OOP

Certifications

AWS Knowledge: Architecting (AWS) • AWS Cloud Practitioner (DataCamp) • Docker, Kubernetes & OpenShift (IBM) • CI/CD Foundations (IBM) • Monitoring & Observability (IBM) • Agile Development (IBM) • Java Programming I & II (Helsinki University) • MongoDB Basics (MongoDB University)
